Ducaton of Flanders

Patagon or Rix doller of Flanders

<63v>

The Exu or French Lewis goes now in France for 3$^{liv.}$ 16^{sols} & is worth 4^s 6^d & thence the Livre is worth 1.^{s} 2^d∟21. The Lewid'or goes for 14 livres which come to 16.^{s} 6^d∟94 of o^{er} money. At which rate a Guinea is worth 1.o^s. 8^d∟18. For as 17^s 2$\frac{4}{5}$ to 16.^{s} 6∟94 so is 21^s. 6^d 10. 20.^{s} 8∟18

The Ducat of gold is coyned in several parts of the Empire & some countries adjoyning & is every where of the same weight & fineness excepting that the Hungary Ducats are more certainly of full value, some of the German Ducats by accident or the unskilfulness of Assaymasters being not so fine as they ought to be. The Ducat is every where coyned for two old Rix Dollers of full value or nine shillings & usually goes at that rate or within two or three Styvers more or less whereas in England it is worth 9^s. 6$\frac{1}{2}$^{d}. But if the Rix Doller be of a lower value (as are the the Rix Dollers of Holland, Flanders Danemark & several parts of Germany the Ducat may go for two Rix dollers & 6 8 or 10 Styvers or above.

In Holland the Ducat goes usually for 5 Guilders & about 5 styvers that is in o^{er} money for 9^s. 1$\frac{3}{10}$^{d}: at which rate a Guinea is worth 20.^{s} 6$\frac{1}{5}$^{d}.

The Lewidor goes in Holland for 9 Guilders & about 9 styvers that is for 16.^{s} 4^d∟77. At which rate a Guinea is worth 20.^{s} 5$\frac{1}{2}$^{d}.

At Dantzick the Ducat is usually vallued at 2 Rix dollers or 9^s & at that rate a Guinea is worth 20^s. 3^d$\frac{1}{2}$. And if the Ducat be there sometimes valued at 2 or 3 sols more then two Rixdollers the Guinea will still be worth less then 2o^s. 7^d.

At Hamborough the Ducat goes for two Dollers & about 8 or 9 sols lubs. This Doller is three Marks lubs or of Lubec & a Mark is 16 sols lubs, so that this Doller is 48 sols lubs. But the Alber Doller with the Cross (which after wearing is worth less then 4^s 6^d) goes for 52 sols lubs & therefore the other Doller is worth less then 4^s 2^d & 2 Dollers 9 sols lubs (the value of a Ducat) are less then 9^s 1^d. And at this rate a Guiena will be worth less then 20^s. 5^d$\frac{1}{2}$. The Marks & sols lubs are there accounted double to the Marks & sols Dans or of Danemark & the four mark piece or crown of Danemark goes at Hamborough for two Marks lubs & by the assay of several pieces is worth 2^s. 8^d∟4. And therefore three Marks lubs are worth 4.^{s} 0∟^{d}6. This is the

value of the common Hamborough Doller & two Dollers & 9 sols (the value of the Ducat) are 8^s. 10$\llcorner$^{d}4. At which rate a Guinea is worth but 20^s.

At Berlin the new Rix Doller with the cross goes for 30 gross, & they have there another Rix doller which goes but for 24 gross & so is not worth above 43$\frac{1}{5}$ pence English Exchangers put it at a par with 40 sols of Holland which make s 41$\llcorner$64 pence English. And the DUcat goes at Berlin for 2$\frac{2}{3}$ of these Rix dollers or 9^s. 3^d. At which rate a Guinea is worth 20^s. 10$\frac{1}{2}$^{d}.

The Lewidor of France & spanish Pistole go at Berlin for between 4$\frac{3}{4}$ & 4$\frac{4}{5}$ of these Rix Dollers, that is between 16.^{s} 1^d$\frac{4}{5}$ & 16.^{s} 5^d$\frac{1}{5}$. At which rate a Guinea is worth between 20^s. 2$\frac{1}{4}$^{d} & 20^s 6$\frac{1}{2}$.

At Geneva the Hungary Ducat was lately valued at 2 Ecus & 2 or 3 sols of France that is at 9^s 2^d or 9^s 3^d At which rate a Guinea is worth about 20^s. 10^d. There also the Lewidor was lately valued at 3$\frac{3}{4}$ Ecus of France or 16^s. 10$\frac{1}{2}$. At which rate a Guinea is worth 21.^{s} 1.^{d} But gold was lately higher in France then at present, which might raise the price of Lewidors at Geneva.

At Bulloign in Italy the Piastre of Spain or piece of 8, went lately for 4$\frac{1}{4}$ lires & the Pistole of Spain for 15$\frac{1}{2}$ lires. So that the Pistole is then recconed worth 3$\frac{11}{17}$ Piastres which amounts to 16^s 4^s$\frac{16}{17}$, supposing the Piastre worth 4^s. 6^d. At which rate a Guinea is worth 20^s. 5$\frac{1}{2}$^{d}.

But the coynes of the several Principalities of Italy I cannot yet procure in any competent number so as to make a judgment of the proportional value of gold & silver grounded upon experiment.

<64r>

By the French Kings Edict of Sept 17 1701, the Marck of fine gold is valued at 494 livres 6 sols 4 deniers & the Marck of fine silver at 32 livres 16 sols seven deniers. According to which proportion a Guinea is worth 20^s 8^d$\llcorner$63

<184r>

Eighteen pieces of Hanover silver money of fine silver marked $\frac{2}{3}$ were in English Troy weight 7^{oz} 11^{dwt} 16^{gr} And therefore this is the weight of an Hanover Mark.

Four of these pieces being doubly assayed three of them proved 11^{oz} 19^{dwt} fine & the fourth was 11^{oz} 18 $\frac{1}{2}$^{dwt} fine. All of them scant

A pound weight Troy of fine Gold, (accordig to the englisg standard {)}, is equal in value to 15 pounds weight 2 ounces, ten penny weight & 7$\frac{8}{25}$ grains Troy of fine silver. And an hundred pounds weight Troy of fine silver is equall in value to Six pounds weight seven ounces, five penny weight fourteen grains & $\frac{5}{8}$th of a grain of fine Gold.
